

Wei-Yun Neve Ning

Senior Product Designer, AI First

#AI-First

#EdTech & HR Tech

#B2B SaaS

Senior Product Designer with 7+ years designing AI-enabled products, B2B SaaS platforms, consumer journeys, marketplace dynamics, fintech workflows, and operational tools. Owns end-to-end journey design from discovery and research to prototyping, validation, high-fidelity design, and developer handoff. Simplifies complex decision-making journeys into clear, scalable product experiences with proven impact: +30% conversion, +22% retention, and 50% operational efficiency gain. Uses Claude Code, Cursor, v0, and Lovable to accelerate research, prototyping, iteration, and product exploration.

EXPERIENCE

AI Product Builder

Built with Cursor + Claude Code

December 2025 - Present

Workshop Management System (Password: linen-clay-spool-amber-94)

- Built an AI-assisted operational product from concept to working prototype, covering booking flows, inventory tracking, venue management, financial reporting, and promotional planning.
- Demonstrated an AI-first product workflow where prototypes become specs, AI accelerates implementation, and design judgment refines the final experience.
- Designed with tokens, components, and reusable patterns for speed, consistency, and scale.

Fun Food Spinner

- Built a playful consumer-facing micro-product from concept to shipped product. Demonstrates rapid prototyping with AI and lightweight product experimentation.

Senior Product Designer → Design Lead

Hsinfei International · B2B2C Scale-up

November 2022 - November 2025

- Joined as the first design hire and grew into Design Lead. Built the design process, product design standards, and collaboration rhythm from scratch across product, engineering, operations, and marketing.
- Owned end-to-end journey design across B2B tools and consumer-facing B2C platform experiences, from opportunity framing and discovery to validation, handoff, and post-launch iteration.
- Shaped roadmap priorities with leadership and PMs. Translated business, client, and user needs into product decisions, design direction, and measurable success metrics.
- Ran discovery through user interviews, usability tests, session recordings, surveys, competitor reviews, and A/B experiments. Turned behavioural evidence into product priorities.
- Validated assumptions through clickable prototypes and rapid experiments before engineering investment, reducing delivery risk and avoiding unnecessary build effort.
- Redesigned onboarding, verification, and transaction flows. Increased conversion by 30%, retention by 22%, and operational efficiency by 50% through iterative product design.
- Reframed an AI-first product direction with evidence. Tested AI-generated content against human-curated content, identified the user trust gap, and repositioned AI where it improved efficiency without weakening conversion or retention.
- Shipped a conversational AI language practice product for English and Japanese learners. Defined how the AI appears, responds, corrects, and builds trust inside the interface.
- Designed AI-assisted UX patterns including suggestions, confidence indicators, overrides, feedback loops, and human-in-the-loop interactions.
- Architected the design system across components, patterns, design tokens, states, edge cases, documentation, and governance. Drove consistency across mobile and web.
- Designed data-heavy and compliance-sensitive workflows across onboarding, identity verification, payments, approvals, account management, permissions, and operational processes.
- Partnered with product managers, engineers, data, marketing, QA, and customer support. Delivered clear flows, states, edge cases, rationale, and implementation-ready handoff.
- Mentored designers through reviews, pairing, feedback cycles, and design rituals. Raised the quality bar while keeping delivery moving.

SELECTED SKILLS

Product Strategy & Discovery

Shape product direction, frame ambiguous problems, run user interviews, map journeys, validate assumptions, and connect design decisions to product metrics.

AI-Enabled Product Design

Design AI-assisted workflows, conversational experiences, trust patterns, feedback loops, confidence indicators, and human-in-the-loop interactions.

Experimentation & Product Metrics

Run usability tests, A/B tests, clickable prototypes, and rapid experiments to improve conversion, activation, retention, and operational efficiency.

Design Systems & Product Craft

Build scalable components, patterns, design tokens, interaction flows, data-heavy interfaces, mobile/web experiences, and developer-ready handoff.

EDUCATION

MSc Events Management

Bournemouth University
2021-2022, Bournemouth, UK

Specialised in audience research, stakeholder coordination, and experience design across complex multi-stakeholder environments.

LANGUAGES

English, Fluent

UX Researcher & Product Designer

Mandarin Chinese, Native

East London Waterworks Park · Volunteer Project

November 2024 - November 2025

- Led user research and behavioural analysis for a community engagement platform focused on sustainability. Translated findings into product priorities and validated improvements with end users.
- Maintained the Figma design system with reusable components, accessibility standards, and cross-platform patterns.

Brand & System Designer / Operations & Systems Specialist

ShinWang Die Casting Industrial Co., Ltd

August 2017 - August 2020

- Designed brand and visual systems across 4 international product launches for a premium industrial manufacturer. Delivered landing pages, campaign visuals, marketing assets, and product specifications.
- Built ERP, CRM, operational tooling, and workflow systems for sales, finance, and operations teams. Improved cross-team efficiency by 15% through SOPs, structured processes, and clearer handoff.

OTHER EXPERIENCE

Web3 Marketing Researcher

Crypto-Arsenal

March 2024 - September 2024

Analysed user behaviour, marketplace dynamics, token economics, and emerging Web3 ecosystems. Translated findings into strategic frameworks for positioning and commercial decision-making.

Student Ambassador

Bournemouth University

April 2021 - August 2022

Hosted events, presented to international audiences, and created content for prospective students. Built strong communication skills across multicultural environments.
